

**Figure 2.** An analysis of individual actions recommended for mitigating climate change in ten Canadian high school science textbooks. The number of unique textbooks making each recommendation is shown at the end of each bar. Recommendations are approximately ranked from most effective at reducing greenhouse gas emissions at the top to least effective at the bottom, following data in figure 1 (we have not quantified the emissions reductions from civic actions). Recommended actions (based on emissions savings in figure 1) are in bold. See supplementary materials 3 for full breakdown and list of textbooks.
